Premium Data Centres –
Premium Services

From data centre to cloud and throughout the world
Colocation and connectivity

The IT infrastructure at our data centre is designed for maximum security and availability. Our customized services enable you to reap the benefits of outstanding agility as you advance and align your IT operations to meet the requirements of the future.

Maximum security and availability for your business IT
Infrastructure, network, services

Telehouse Germany is your strong IT partner, supplying top-class services with data connections all over the world. As specialists in colocation and connectivity, we create the optimum conditions for setting up and operating scalable IT architectures in which all elements interact flawlessly.

From our high-availability data centre in Frankfurt/Main, we supply infrastructure, network solutions and ITC services tailored to customers' individual needs. Around 50,000 sqm in area, this data centre is among the largest and most modern in Germany. It uses one of the foremost global Internet nodes (DE-CIX) to supply direct access to over 400 carriers, Internet service providers and cloud providers. Maximum security is guaranteed by a five-level security system, round-the clock surveillance and a network operation centre staffed 24/7.

50,000 sqm data centre in Frankfurt am Main

Launched in 2012, Telehouse Germany rapidly established a strong position as a leading data centre provider and has continuously expanded its services and products. We currently operate four data centres on our company campus in Frankfurt. A fifth is underway and is scheduled to open in March 2020.

Our Frankfurt campus is in an easy-to-reach central location and supplies customers with the ideal environment, whatever their needs – from server housing to a full-scale data centre including office space for IT teams. As a subsidiary of KDDI Corporation, we are also integrated into a global network of more than 40 data centres.

Colocation

From single racks to dedicated data centre space and multi-location colocation infrastructure in our global data centres, We maximize your flexibility and ensure tailored fulfilment of all your growth and security requirements and your resource needs – from single racks to dedicated data centre space, or even multi-location colocation infrastructure in our global data centres.

Connectivity

Our 100% carrier-neutral data centres provide a wealth of options for establishing global networks. You have access to over 400 carriers and cloud providers and can connect to the main international Internet hubs. In addition, you can use VPN connections in over 85 countries through our KDDI network.

Telehouse Worldwide

The standard for global communication

Telehouse stands for 30 years of experience and expertise in IT data centre operation. Founded in 1989, Telehouse was Europe's first neutral colocation provider. Today we operate more than 40 data centres with a total area of 400,000 square metres, where our global customers base their business-critical systems. So what makes us unique? We supply IT and network environments plus connectivity that are tailored to our customers' needs – at guaranteed 99.999% availability.

- Telehouse connects over 3,000 business customers all over the world, including over 800 Internet service providers and carriers as well as content providers, financial services and industrial companies.
- Our global network of data centres supplies customers with fast, secure and efficient access to cloud providers, service providers and carriers, enabling them to set their sights on international growth.
- Data traffic features high availability and high performance, ensured by direct access to central Internet hubs (Frankfurt, Hong Kong, London, New York, Paris and Tokyo).
